

TRIPLE-T³_{system} SYSTEM
SAND-OBSCURED

The best of two worlds in one

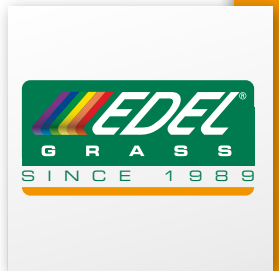

+ predictable ball roll + high ball speeds + low friction coefficient

Edel Hockey Triple-T System Sand-Obscured

The best of two worlds in one

The Triple-T System Sand-Obscured brings together the best of both worlds... all the performance of a classic water-based pitch yet the cost efficiencies of a sand-dressed alternative. And the benefits don't stop there. Key features include speed and predictable ball roll, player comfort and a smarter look. Gone is the sandy appearance of the pitch. Engineers have ensured that the fibre structure and pile of the Triple-T System Sand-Obscured match the playing characteristics of water-based pitches. There is even an optional sub base – the Edel Grass Sports Layer – enabling the use of playing techniques previously only possible on water-based surfaces.

The Triple-T System Sand-Obscured... a top pitch for athletes and amateurs alike!

...it + the same hockey techniques as water-based pitches + can be

A close-up photograph of a golf club head, likely a driver, with a yellow and blue design. The club is positioned as if it has just struck a white golf ball. The background is a lush green golf course with a white sand trap visible. The lighting is bright, creating strong shadows.

Fibre type	: 9750/10 Dtex Monofilament (micro curled KdK)
Fibre weight	: 1.840 gr/m ²
Fibre length	: stretched 22 mm / curled 18 mm
Total weight	: ca. 3.225 gr/m ²
Tuft distribution	: 3/16"
Knots per m ²	: 35.700 m ²
Filaments per m ²	: 714.000 m ²
Backing	: Fibreglass polyester reinforced
Underground	: Lava-rubber & Sports Layer
Colour	: Summer green
Lining	: White
Overrun	: Blood red / Reflex blue (optional)

ball roll + high ball speeds + low friction coefficient + the same

Edel Hockey Triple-T System Sand-Obscured Summary of characteristics

In addition to the standard construction method, depending on country, it is also possible to build the Triple-T System Sand-Obscured on an Edel Grass Sports Layer. This is a closed cell foam shock pad which is resistant to temperature change. Uniquely it retains its shape. (Special grooves in the Edel Grass Sports Layer allow water runoff on both the top surface and the underside ensuring a perfect balance of permeability and water-resistance.) Combine the “grass” layer with the sub base of your choice and together all the quality components guarantee optimal playing properties and a perfect, lasting performance.

Triple-T System Sand-Obscured stands for:

High ball speed and ball roll predictability • Application of the same hockey techniques as on water-based pitches • High fibre density (TenCate monofilament) • Low friction coefficient • Low/No H₂O (playable with or without a sprinkler system) • Choice of sub base • Hardwearing • Optional Edel Grass Sports Layer • Colourfast • UV-stable

hockey techniques as water-based pitches + can be played with or without a sprinkler system

the same hockey techniques as water-based pitches + can be played with

Edel Hockey Triple-T System Sand-Obscured The system-based approach used by Edel Grass, TenCate and Oranjewoud Sport

Edel Grass has over 25 years' experience of creating artificial grass hockey pitches. Together with partners TenCate and Oranjewoud Sport, we are passionately committed to ongoing research and development, combining our knowledge to come up with innovative patented technologies and applications. The Triple-T System Sand-Obscured pitch is a result of such collaboration.

By developing systems which correspond to the needs of players, trainers and sports associations, together we are contributing to the ongoing development of hockey as a sport – for top professionals and amateurs alike.

Edel Hockey Triple-T System Sand-Obscured is FIH National certified

*Edel Grass is a
partner of the Asian
Hockey Federation.*

or without sprinklers + hardwearing + UV-stable + colourfast
